

O&M SPECIAL PROJECTS

Assess, troubleshoot, repair and upgrade your solar assets

Our Special Projects team investigates, troubleshoots, repairs & upgrades all aspects of large solar assets. We draw on decades of experience installing, operating, and maintaining solar systems, as well as extensive field experience and technical analysis from the more than 1 GW we currently manage.

Inspections

(e.g. quality inspections, commissioning, troubleshooting, end of warranty)

Repair & upgrade aging equipment

(e.g. inverters, panels, racking, communications)

PV Removal & reinstallation

(for new roof & roof repairs)

Repair of damage

Incl. damage due to weather, accidents, and vandalism

Engineering services to improve underperforming assets

(e.g. performance modeling, feasibility studies, 5-year Arc Flash Analysis)

Additional services

(e.g. camera installation, equipment labeling, safety upgrades)

WHY CHOOSE BORREGO O&M

- Customers choose Borrego because our technical subject matter experts help them make better decisions
- Most of the 1GW under Borrego O&M management are for systems our EPC business did not build
- We take a holistic approach to solving performance issues with your sites and make recommendations based on your financial goals
- We have boots on the ground in the major distributed generation markets to improve your entire portfolio of solar & energy storage assets
- We work efficiently and communicate proactively and transparently using real time data
- Our O&M engineering group has support from internal Borrego Professional Engineering teams as needed
